REMARKS

In the Office Action mailed on December 15, 2004 the Examiner rejected claims 1-5 and 7-9 under 35 U.S.C. 102(e) as being anticipated by U.S. Patent 6,609,202 B1 to Chan. The Examiner also rejected claims 10-23 under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,609,202 B1 to Chan. Finally, the Examiner rejected claim 6 under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,609,202 B1 to Chan in view of U.S. Publication No. 2003/0005292 A1 to Matthews, Jr. et al.

In response, Applicant has amended claims 1-4, 6-9, 14-17, 23 and added new claims 24-26. Claims 5, 10-13 and 18-22 are canceled. Reconsideration and issuance of a Notice of Allowance are respectfully requested.

Applicant has amended pending independent claims 1, 14 and 23, and drafted new independent claim 24 to include two different numbers of services. Examples of services are listed in Applicant's specification on page 1, lines 9-12. The system described by Chan in U.S. Patent 6,609,202 can only send one service at a time to an individual user. This is shown in Chan's Figure 2. Chan's system receives an unencrypted signal. In one instance, this signal can be carried on a CD-ROM. See col. 9, lines 39-4. Based upon receipt of this one unencrypted signal, Chan's system performs an authentication protocol and retrieves an encrypted signal that is decrypted and combined with the unencrypted signal to give the user the data in full. See col. 11, lines 7-25. Chan's machine can only receive one service at a time that is associated with the received unencrypted signal. Chan does not teach or suggest utilization of a plurality of different services at the same time.
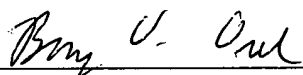

Applicant draws the Examiner's attention to col. 13, lines 10-20 of the Chan patent. In the Final Rejection mailed December 15, 2004 the Examiner cites to this section of Chan as teaching the transmission of different numbers of services. This section of Chan does not teach nor describe the transmission of a plurality of services. As stated previously, Chan's system can only send one service at a time to an individual user.
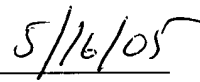

Applicant requests an interview before a first action. See MPEP 706.07(h) and 713.02. The Examiner is kindly requested to contact the undersigned representative to schedule the interview upon reception of these papers.

Respectfully submitted,

Qiu et al.
